

DENSE SHADE SEED MIXTURE

SHADE TOLERANT LAWN SEED

Drought
tolerant

Fast
establishment

Low
maintenance

Maximum
shade tolerance

Quality
turf stand

Dense Shade Lawn Seed Mix is designed for use where sunlight is limited, and turf is desired. A higher percentage of fine & Turf Type Tall fescues, gives this mixture a near maximum shade tolerance in turfgrass situations. The Kentucky Bluegrass used in this mixture exhibits some shade tolerance as well. An improved variety of *Poa trivialis* lends further shade adaptation and is well suited for wet shade conditions. This combination of grasses is ideal for areas with limited sunlight exposure. All of the grasses used in this mixture blend nicely in both color and leaf texture.

Recommended Use: Dense Shade Lawn Seed Mix is designed to perform best in areas that have 50+% shade. As with all turf grasses, however, some sunlight is required for long term survival. It can be used successfully on a variety of soils existing on most sites, including home lawns, commercial properties, parks, schools and other turf areas receiving normal to low maintenance.

DENSE SHADE LAWN SEED MIX

- 30% Intrigue Chewings Fescue
 - 30% Tarnation GT Turf Type Tall Fescue
 - 20% Sword Hard Fescue
