

BEE LAWN SEED MIXTURE

PROTECT POLLINATORS AND CONSERVE NATURAL RESOURCES

Protects our at-risk pollinators

Environmentally friendly

Low maintenance

Strong shade tolerance

Aesthetically pleasing

The **Twin City Seed Bee Lawn Mix** is designed to provide high-quality food for our at-risk pollinators while maintaining the typical recreation associated with the turfgrass lawn. Bee lawns are low-input, meaning that they are environmentally-friendly as they require fewer inputs of water, mowing, and fertilizer as compared to a traditional lawn. University of Minnesota research has shown that bee lawns can support more than 60 species of bees! Protect pollinators and improve your carbon footprint by planting a bee lawn!

Suggested maintenance: Bee lawns are low maintenance *after* they are established. Be sure to implement a light and frequent watering program after seeding. Once mature, we recommend maintaining bee lawns at a slightly taller height than what is typical of a traditional lawn. Letting a bee lawn grow out to 4.5" and cutting back to 3" will be sufficient but allowing the lawn to grow out to 6" and cutting back to 4" will likely result in more blooms (and more food) for the pollinators.

BEE LAWN SEED MIX

- 23.5% Boreal Creeping Red Fescue
- 23% Intrigue Chewings Fescue
- 23% Gladiator Hard Fescue
- 23% Blue Mesa Sheep Fescue
- 4.5% White Dutch Clover
- 0.4% Creeping Thyme
- 2.6% Self-Heal

SEEDING RATES

New turf

5 lbs/1000 sqft

Overseeding

5 lbs/1000 sqft

ESTABLISHMENT

Germination in 7-15 days under ideal conditions

7265 Washington ave. S.
