

SUN & SHADE LAWN SEED MIXTURE

ALL PURPOSE LAWN SEED

Drought
tolerant

Fast
establishment

Low
maintenance

Strong
shade tolerance

Wide
adaptability

Sun & Shade Lawn Seed Mix provides rapid germination and establishment, for a dense, quality turf requiring normal to low maintenance. It is best used where conditions provide medium amounts of sun and shade. Each turf species in this mix play a role for a successful stand. The Kentucky bluegrass used has some shade tolerance and provides excellent turf density and pest resistance when maintained. The perennial ryegrass can germinate quickly providing protection for slower germinating grasses. The turf type tall fescue and Chewings fescue add shade tolerance to the turf stand and will perform in a low maintenance environment. The Sun & Shade Lawn Seed Mixture is proudly approved by the Turfgrass Water Conservation Alliance.

Recommended Use: Sun & Shade Lawn Seed Mix is designed to perform best in areas that have 30% to 50% shade. It can be used successfully on a variety of soils existing in most sites, including home lawns, commercial properties, parks, schools, and other turf areas receiving normal to low maintenance.

SUN & SHADE LAWN SEED MIX

30% Manhattan 7 GLR Perennial Ryegrass
20% Enchantment Chewings Fescue
